## HIGH TECHNOLOGY & MAXIMUM BREATHING COMFORT WITH SCUBAPRO REGULATORS

### SCUBAPRO FIRST STAGE REGULATORS

First stage regulators are divided into piston & diaphragm categories.

#### SCUBAPRO PISTON TECHNOLOGY

The general advantage of a piston first stage lies in its reliability & reduced maintenance requirements. More importantly, no other design can reach the high air delivery rate of a balanced piston controlled first stage. First stages with air-balanced pistons deliver significantly more air to the second stage than any other first stage. This technology is featured in our MK25 EVO first stages.

Classic downstream piston - The classic downstream valve is the first choice of diving centers & rental facilities worldwide for warm & moderate water temperatures. This technology is featured in our MK2 EVO first stage.

• **SCUBAPRO DIAPHRAGM TECHNOLOGY**

Diaphragm-based first stages are environmentally sealed so water cannot enter the inner mechanism. Diaphragm first stages have been the favored choice of cold water divers & those working in contaminated or muddy water. This technology is featured in our MK17 EVO & MK11 first stages.

• **SCUBAPRO SECOND STAGE REGULATORS**

A high quality second stage can significantly reduce stress & enhance diver safety by providing a smooth, low-effort breathing response, resulting in ample yet controllable quantities of air.

• **AIR-BALANCED VALVE TECHNOLOGY**

The air-balanced valve technology of SCUBAPRO second stages features a balancing chamber in the second stage mechanism, slightly offsetting the force of the downstream air entering from the first stage. Air-balanced valve technology is featured in X-Series, S-Series & G-Series second stages. For best results, they should be teamed with balanced first stages like the MK25 EVO or MK17 EVO.

## INDIAN OCEAN REEF GUIDE

by Helmut Debelius

Maldives - Sri Lanka - Thailand  
South Africa - Mauritius  
Madagascar - East Africa - Seychelles

The author made his first dives in tropical waters around Sri Lanka 25 years ago. Since then he explored virtually the entire Indian Ocean with his camera, diving not only in the tourist centers like the Maldives or Seychelles, but also taking UW-Photos at remote islands like Cocos-Keeling in the East or Aldabra in the West. The results are shown in this book including more than 1,000 photos from the natural habitat of the marine animals. Special emphasis was given to rare species like sharks & rays.
